Summary

Full Stack developer with a background in accounting and finance. Earned a certificate from the University of Sydney's Full Stack Online Boot Camp. Conscientious and humble worker and listener with the ability to build and test full stack web applications within the agile methodology. Determined and supportive colleague and teammate who thrives working in a team of any size to collaborate and solve issues to produce quality code.

Technical Skills

- | | | |
|-------------------|---------------------|--------------|
| ✓ HTML, CSS, AJAX | ✓ Agile Methodology | ✓ AWS |
| ✓ Git, Github | ✓ Node.JS | ✓ Python |
| ✓ JavaScript | ✓ Express.JS | ✓ SQL/ MySQL |
| ✓ Java | ✓ React.JS | ✓ MongoDB |

Projects

Full Stack MERN Application:

Built and deployed a fully functioning MERN web application utilising a MongoDB/Mongoose database and ORM, an ExpressJS server, a ReactJS front end, NodeJS web framework and a GraphQL querying language. This project has a fully synced front and back end, an encrypted and authenticated login and signup with the JWT package, and is styled mainly by me with some React-Bootstrap elements. This project has been deployed to Heroku and will be perpetually in development as my ReactJS skills continually progress.

Code: <https://github.com/AndrewGavegan/trana> **Deployed:** <https://trana-application.herokuapp.com/>

MERN Social Network Back End:

Created back-end functionality for a social network style application by utilising a mongoDB/mongoose database/ORM and an expressJS server. This project boasts a back end where users can be created, those users can post, users can comment on posts and be friends with other users. This project was the backbone for learning what would eventually be a full stack MERN application.

Code: <https://github.com/AndrewGavegan/SocialNetworkBackEnd>

MVC Blog:

Created a CMS-style blog site completely from scratch adhering to the MVC software architecture pattern, utilising handlebars.JS as the templating language, MySQL/Sequelize as the database/ORM and express/express-session for server and server authentication. This project let users post and comment like a traditional blog site would. This project has been deployed to Heroku and was my final look at the MVC structure before moving onto the MERN structure of software development.

Code: <https://github.com/AndrewGavegan/Technotizing> **Deployed:** <https://technotizing.herokuapp.com/>

Work Experience

Strikeforce AMC

June 2020 – Present Sydney, NSW

Working at Strikeforce as a merchandising representative I have gained a plethora of new skills to bring to the workplace. Working in the field primarily by myself and only liaising with superiors via phone and email, I have gained a more trusted and deeper sense of responsibility based on personal values and not something else such as a fear of punishment. Completing work in various Woolworths and Coles supermarkets on behalf of Strikeforce, I have honed my skills liaising with new people in new places nearly every single day while representing my company in the field.

Primary roles include liaising with store contact, discussing the days required layout or job, completing work and then getting it checked by the store. Most of my work involves completing store Planograms or layouts while infrequently installing merchandising material on behalf of other brands. Have been tasked with leading a team of colleagues in a night shift setting completing large store changes overnight with a team of 4 or 5 people.

Woolworths Northwest Plaza – Grocery Department

September 2016 – January 2020

Brisbane, QLD

At Woolworths, I have become a valued, loyal member of the team. I am entrusted with a range of tasks and responsibilities, most of which are managerial in nature. For example, I lead a night fill team of 5 employees once a week where I delegate tasks and work myself to contribute to the upkeep of the store effectively and successfully.

Primary roles included store routine continuity, customer relations and the upholding of the inventory cycles. Working always on a schedule with minimum flexibility. Routinely entrusted with the supervision of colleagues in a team unit or one on one. Entrusted with evening and after-hours supervision of the store and team members within, handling of the store safe, store keys and alarm codes.
